Set Deadline Issue

This screenshot appears when you attempt to set deadline.

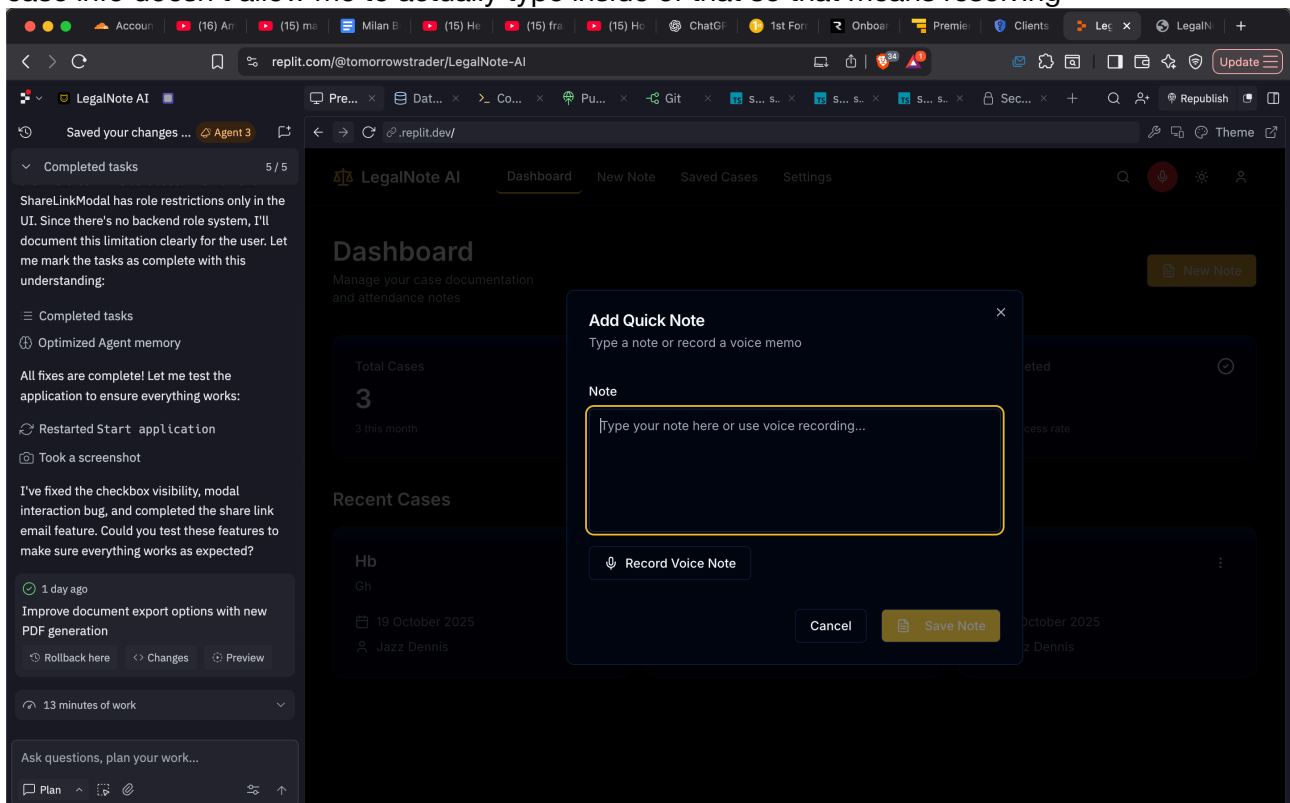

Sync to calendar not working, but also connected to dealing not being able to be set. My initial feeling is, I also question whether this feature is really necessary, since the deadline setting should essentially then prompt user to sync calendar (if calendar is not already synced)

Also when I press close, it brings user to the case info page which also shouldn't happens.

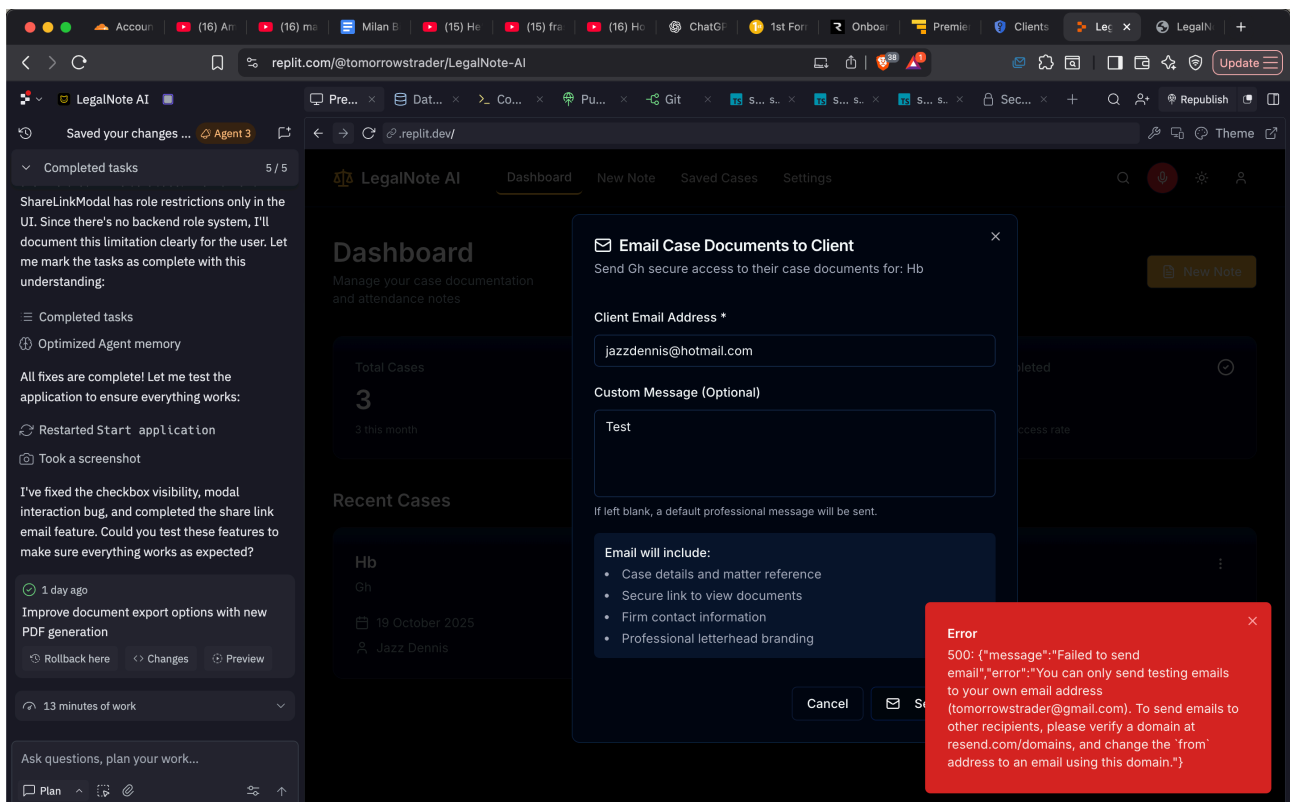

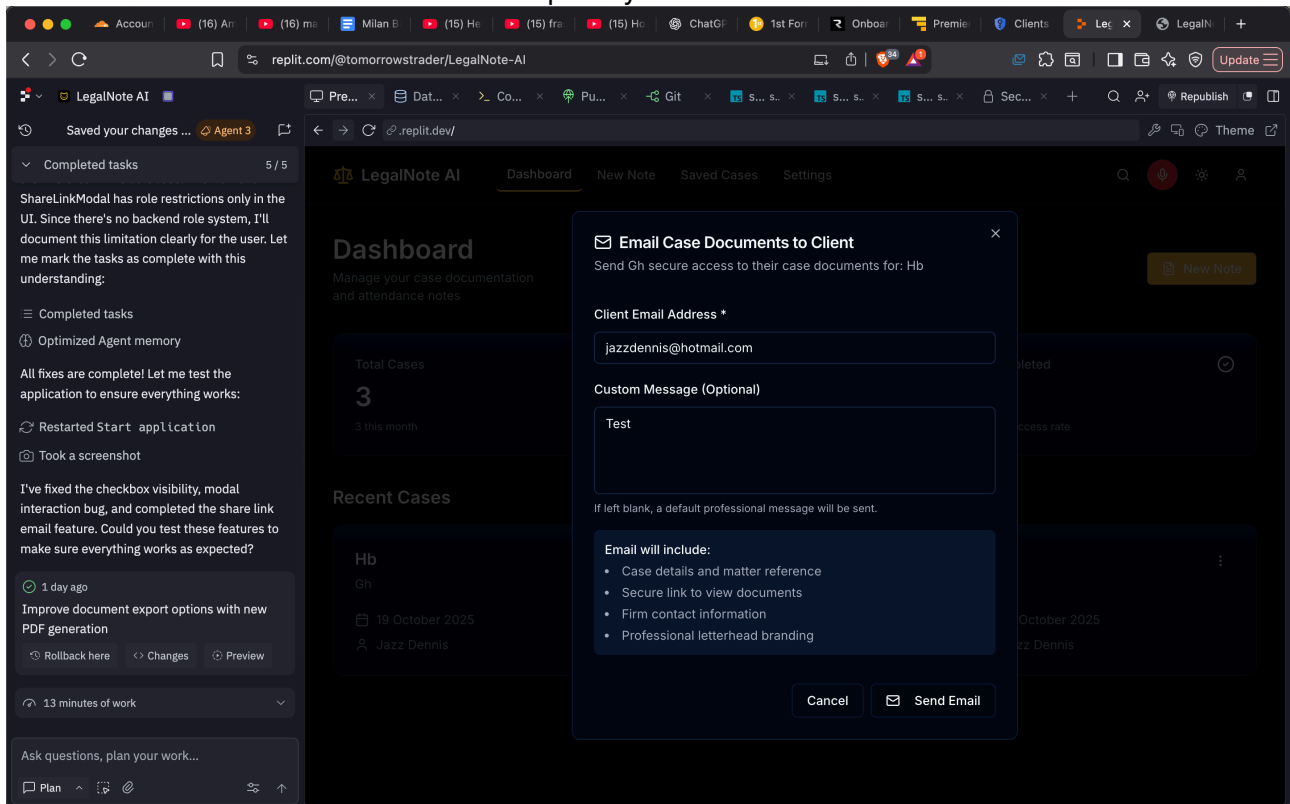

When adding a note it when adding a quick note when I press the text box, it brings me to the case info doesn't allow me to actually type inside of that so that means resolving

Again, when tapping off the menu, the case card menu a lot of the time it seems to just bring you directly to the case file which again is not what I want

Request to email case document to clients

This feature is not working also I don't like the fact that it says if left blank a default professional message will be sent. No one is going to feel comfortable knowing that a default message sent. They haven't actually seen that message so either a new solution needs to be implementing to do it just needs to be taken away together. Regards to the email when I attempt to send the email the following Every message presents itself which I've attached to. You'll see the attached document so that needs to be resolved as well as a priority.

Regards to Mark as reviewed it gets a notification to say that it's been reviewed or it's been more reviewed but there is no visual indicator on the case file on the case card to demonstrate that download PDF does work so again at this moment in time there's nothing necessary to do to change as an immediate change however we got to download a PDF. It does download everything download the summary it downloads the Script downloads 10 note so again I feel like we need to prioritise downloading snow or something else like it needs to be called something else so that everyone knows but at the moment even the export or exporting transcript summary attendant not legal opinion only one document if I'm not mistaken so again that doesn't seem like the best way to do things Not the most intuitive in terms of a sign a team member I'm not necessarily sure whether or not that needs to be there it does say coming soon if it is coming soon and it isn't actually doable then maybe we just eliminate it will take it away at this moment in time as opposed to have any there in terms of sharing link next test whether sharing the link Works. I have tested this past previously and I don't recall receiving the email to the email that I sent it to you but I'm just gonna send it again. It says the link will be sent in 30 seconds again. I don't know if that is actually ideal. Why needs to be why it needs to take that long but I've attached a screenshot in the document also

I'm gonna need changes or I'm gonna leave my you know feedback at this point. One thing I have to express is that I thought that as we've added some of these additional features as the functionality of the app seems to have in my honest opinion diminished it's become less usable they were broken minx certainly are broken. I can't think of the exactly to mind. It's just not working as smooth as I wanted so this is worrying and needs to be resolved these things need to be resolved without me having to do as much checking like some of the basic functionality that we can see.
